

NPTE QUESTION: RANCHO LOS AMIGOS LEVELS OF COGNITIVE FUNCTIONING

with Will Crane,
PT, DPT

SAMPLE NPTE QUESTION

While examining a patient with a traumatic brain injury, the physical therapist notes that the patient responds to painful stimuli inconsistently. When a stimulus is introduced to the patient, the patient responds with gross body movements and vocalization. The patient is unable to follow simple commands. Which of the following Rancho Los Amigos Levels of Cognitive Functioning does the patient BEST fit?

- A. Automatic appropriate
- B. Confused appropriate
- C. Generalized response
- D. Localized response

BREAKDOWN OF ANSWER CHOICES

- A. Automatic appropriate (level 7)
 - a. Patient moves through daily routine in robot like fashion
- B. Confused appropriate (level 6)
 - a. Patient can complete tasks but require verbal instructions to complete
 - b. Actions are not automatic
- C. Generalized response (level 2)
 - a. Inconsistent and non-purposeful reactions to stimuli
 - b. Responds with gross body movements and vocalization
- D. Localized response (level 3)
 - a. Specific and inconsistent reactions to stimuli
 - b. Ability to follow simple commands

ANSWER

C. Generalized response
